

CUSHION WITH HIGH-QUALITY-LATEXFILLING

An adequate and ideal lying position must be the top criterium when it comes to choosing an animal bed. Normal commercial animal beds are usually filled with foam plastics with very little density, with rests of thin polyester fleece and foam plastics or polystyrene balls. They are usually far too thin and not stable enough, resulting in your pet ending up sleeping quite soon on the hard, cold floor. Such fillings do not offer your pet the necessary point elasticity for a proper support of the spine and of the joints.

ORTHOPEDIC PILLOWS

Our cushion inlet was specifically optimized for animals according to specific orthopedic criteria. They are filled with high-quality latex balls with a very high density. As a general rule, the higher the density, the more elastic, durable, sustainable, and the better will be the support effect of cushions and their capability to regain shape, as well as their support of the main position changes when sleeping. Thanks to the high density, the cushions maintain their stability and shape for a long time, remain permanently elastic and last for very long and are hardwearing.

Through the usage of latex, our cushions are anti-allergic, antibacterial, and regulate humidity and temperature. Latex also has antiseptic characteristics and is very unlikely to be attacked by mites.

•

IDEAL FOR THE SPINE

The excellent point elasticity of our latex filling moulds perfectly to the individual shape of your animal, in order to avoid any compressions on the intervertebral disks and moving joints of the spine. An excessive compression on the spine would interfere with its regeneration.

Thanks to the optimized height of cushions - which varies according to the size and weight of the animal - and to the specific latex filling in their core, our indoor cushions for pets offer your beloved four-footed a perfect sensation of lightness and relaxation for their spine and their joints.

Besides, it is possible to minimize or even avoid bedsores and pressure sores, especially in elder animals or in animals affected by hip joint dysplasia or arthrosis. Such category of cats and dogs is helped to stand up thanks to the natural boost of latex. The padding is absolutely noiseless when the animal moves, thus enabling a quiet and restorative sleep. Latex offers an excellent capability of suspension and to regain shape in the position changes; it is absolutely noiseless when the animal moves, thus enabling a quiet and restorative sleep, as well as ensuring a perfect relaxation and regeneration of your beloved four-footed.

ORTOPAEDIC DOG BEDS WITH MEMORY FOAM

A wrong sleeping berth can cause muscle tension and bone-joint diseases even with healthy dogs - just like with humans matrace covers with memory foam help the body to recover ideally during sleep and rest periods. This high-tech-foam reacts to body temperature and weight. Thanks to its pressure reducing feature the memory foam dog bed lets your dog sleep in a relaxed and natural position and relieves joints and muscles.

The matrace, made out of 100% memory foam, adapts perfectly to the body, prevents pressure points, and promotes an ideal pressure distribution to every body region (normal foam materials react to counter pressure). While laying down the spine will be kept straight, evenly supported, and in the proper anatomic form. It eases tensions, joints will get relieved, and it can lessen pain. The memory foam dog bed helps the blood flow and promotes a healthy, deep, and relaxed sleep.

Scientific studies show that humans turn a lot less from one side to the other and wake up more relaxed when sleeping on memory foam.

Because of that memory foam is perfect for our orthopaedic dog beds.

Our memory foam matraces have a very high density, are breathable, and temperature adjusting. Because we are only using 100% memory foam (no sandwich-combination of normal foam and fleece) our products are first grade quality. Our dog beds and pillows are produced by a brand-name manufacturer for human matraces here in Bavaria.

Our manufacturer doesn't distinguish between human and animal when choosing materials and produces the products. The orthopaedic dog bed will stay true to form for years.

THE BENEFIT OF OUR ORTOPAEDIC DOG BEDS

This high-tech material was developed by NASA to reduce the pressure on their astronauts during the start and re-entry phase. The mattresses have been used already for years in patient care to avoid bedsores and also on operating tables since it promotes ideal blood flow.

The benefit of our memory foam dog beds:

- optimal relaxation of potential pressure sore.
- improvement of the blood circulation
- decrease of backache and muscle pain
- controled accommodation to every body zone
- thermo active hardness regulation
- no muscle tenseness in the shoulder and ridge musculature
- preventing decubitus pressure sore

We recommend our memory foam dog beds particularly with regard to

- arthrosis and preventing arthrosis
- dysplasia of the hip joint
- dysplasia of the elbow
- spondylosis
- overweight
- older dogs
- after surgeries

CARE OF CUSHION

If necessary, the cushion inlets can be machine-washed at 30° C, although they have a quite long drying time. Please do not dry in dryers!

CUSHION COVER FLEECE

It was the animals themselves that chose the fabric for the covers. During long test series we laid out the most varied types of fabrics here in the office, where our four-footed could lie down and sleep. The fleece we now use was unanimously selected by every cat and dog as their favourite material. Animals love this material because of its closely-woven pile, its softness and its warmth features. But this fabric is also suitable for cushion covers thanks to the breathable activity of the material and the good characteristics for its care. Our cosy fleece, with a density of 400g per square metre, is manufactured in Italy for high-quality outdoor coverings. It remains perfectly soft and fluffy even after frequent washing and has an anti-pilling system.

CARE OF FLEECE

Cushion covers can be machine-washed at 30° C and then gently dried in a dryer at low temperature. This enables to remove the remaining animal hairs.

HAND-MADE IN GERMANY

We want that both humans and animals enjoy our high-quality pet products, for that we enlist manufacturing companies in Bavaria to produce our high-quality pet furniture.

The materials we use are also produced in Germany except of fleece and leather. A big producer of human mattresses makes the dog beds and pillows for us, here in Bavaria. We make no difference between human and animal in choice of materials and high-quality processing. For manufacturing the pet-interiors products, cuddly fleece from Italy, made for top outdoor clothing, is applied. The durable synthetic leather is normally used for the production of seats and interior in automotive industries. We purchase durable genuine leather and the stainless steel and metal components from manufacturers of upholstery industries. At least there are solid felt from sheep's wool, the ship rope and all wicker work from domestic production.

You do not acquire a mass-produced dog bed or cat pillow from an assembly line, instead, you acquire a handmade designer product!

If necessary, our cushion covers, scratch-wrappings or more loose items, can be bought even after years. If our pet furniture should be damaged by external factors or have become unsightly, you can enter it with us for repairs, even after years of use.

IT HAS TO BE DESIGN!

Do you love cats and dogs and great design?
If so, at pet-interiors you have come to the right place.

With this new product we not only fascinated our customers, also the German Design Council. and we were nominated to the design prize in the German Federal Republic. We were nominated to the design prize in the German Federal Republic. This is the highest award that can be awarded in this area and is comparable to the Oscars of the film industry. It has to be design!

To be even nominated for the Design Award of Germany, one has to be awarded at least one significant Design Award. In April 2005, our products have been awarded the Design Prize of Upper Franconia and crafts.

Reviewed are the well-designed, craftsmanship and the innovative new business idea.

PRODUCT PHILOSOPHY

In order to become part of the collection, our pet pillows and beds must meet three criteria which we scrutinise prior to production: Cats and dogs accept the pet products, love it and use it, and evidently feel happy with it. Our dog and cat products are designed to be hardwearing, long-lasting and durable. Unusual design transforms a normal piece of furniture for pets into a sleeping place for cats and dogs with a high design quality.
